channels *via* Kanjithai, Arathumkal and Chettu were constructed so as to connect the sea on the west with the above-said canal. In addition to the three channels, he prayed for the construction of a road from Alleppey to Arurmukkom. In conclusion, the Member requested that the Dewan should take the earliest opportunity to visit the taluk and ascertain for himself the needs of the taluk.

Dewan's reply.—Noted.

81. The desirability of improving the means of communication in the Vaikam taluk.

Mr. K. Narayana Pillai (Member, Vaikam taluk) requested that the following roads might be sanctioned :—

(1) Road from Vechur to Vaikam. There was a village road between the two places but it was not cartable and was in a neglected condition. Several canals crossed the roads and those crossings were difficult and dangerous during the monsoons. He requested that the above road be improved and made cartable and connected with the Kumarakom road and that bridges be constructed across the Maramveettil *thodu* and Vallayil *thodu*.

Dewan.—This work is estimated to cost Rs. 90,000.

(2) The Member, proceeding, said that the second road required was from Piravom to Thalayolaparambu. There was a 3 feet trace between the two places and it was necessary to convert it into a cartable road.

(3) Road from Chenganda to Arukutti. The road was highly necessary as communication between the two places was rendered difficult by extensive stretches of hot sand.

Dewan's reply.—None of these roads are included in the programme of works for the Kottayam Division. The Government have already decided in G. O. No 227/P. W., dated the 12th January 1915, that these works should lie over for consideration after two years.

82. The construction of the Puchakal Canal.

Mr. C. Krishnan Vaidyan (Member, Nominated) stated that the canal called Puchakal *thodu* and lying between Panavalli and Pallipuram proverthies, connected the Vembanad lake and the Ulavaippu Kayal. The *thodu* was only $1\frac{1}{4}$ miles long, of which one mile was in a fairly good condition, but owing to accumulation of silt in the middle of the canal, the canal could not be used. The opening of the *thodu* for a distance of one-fourth of a mile would facilitate communication from the sea-coast to the hills by means of the Kuthiathodu and Ithipuzha river. It would also help transport of goods from the two places and would be an easy route to the town of Vaikam from Pallipuram and Panavalli. He therefore requested that the Puchakal *thodu* be improved and rendered fit for traffic.

Dewan's reply.—Noted.

83. The urgent necessity for improving the Poovakat tank.

Mr. Chacko Ouseph (Member, T. I. C., Changanacherri) said that the Poovakat tank was the only public tank in the town of Changanacherri open to all classes of people. It comprised 11 acres and supplied a great public necessity. The tank was, however, in a neglected condition, the parapet walls all round and the bathing ghats being completely in ruins. The outlet was in disorder and the water was very bad on account of the accumulated dirt of 20 years. In spite of the above defects, the tank was even now used, to the serious detriment of public health, because no other tank was available. He requested that, in the interests of the health of the town, the tank should be thoroughly repaired at an early date.

Dewan's reply.—In regard to this tank, the Chief Engineer says that he has called for a report from the Executive Engineer. I may add that the Government
